CUSHIONED CLAMPING SYSTEMS

CUSHIONED CLAMPING

ZSi-Foster offers a comprehensive line of cushioning clamps – from the original Cush-A-Clamp® to the newer Cush-A-Nator®. There is a ZSi-Foster solution to cushion shock, vibration, noise and temperature.

CUSH-A-NATOR® (See Pages 6 - 8)

The Cush-A-Nator® is the newest breakthrough in cushioned clamping. It offers the user with an option for the highest temperature range of any cushion clamp on the market -65°F to 340°F (-53°C to 170°C), or just the advanced features of the superior new design.

The new Cush-A-Nator® features a "thumb drive" tab that simplifies installation.

It is also a perfect solution for retrofit since the clamp can be installed on a pipe that is already resting on the channel support.

CUSH-A-CLAMP® (See Page 9)

CUSH-A-CLAMP® – channel mounted clamping systems is ideal for multiple line runs. It absorbs shock and vibration, reducing unwanted noise and it prevents galvanic corrosion.

THE CLAMP — This **Controlled Squeeze™** design eliminates over-tightening and rotation while a nylon-insert nut assures a positive lock. **THE CUSHION** — Manufactured from a thermoplastic elastomer, it's built tough to withstand the effects of most oils, chemicals and industrial cleaning compounds, in temperatures from -50°F to 275°F. A patented "Living Hinge" allows the cushion to be spread apart for quick, easy installation. Interlock edges and channel locator legs ensure that the cushion remains in place.

Fits any standard 1 5/8" wide channel.

"Controlled Squeeze" Shoulder Bolt

"Living Hinge"

OMEGA SERIES™

(See Page 15)

The Omega Series™ clamp assembly retains, guides, protects and uniformly spaces line runs.

Attached with two standard fasteners to any flat surface, providing a savings in both space and cost. **THE CLAMP** — Available in steel (with electro-dichromate finish), and stainless steel. **THE CUSHION** — Manufactured from a thermoplastic elastomer, it's built tough to withstand the effects of most oils, chemicals and industrial cleaning compounds, in temperatures from -50°F to 275°F.

CUSH-A-GLIDE™

(See Page 14)

The Cush-A-Glide is designed for fast installation of copper tube or pipe, and can be easily installed in seconds with fasteners of your choice. Just spread the clamp apart placing it over the top of a tube or pipe and fasten one side. Push in the opposite side to the desired tightness, allowing for expansion and contraction, then fasten the other side.

CUSH-A-CLAW

(See Page 10)

Cush-A-Claw Grabs on to your Tube, Pipe, or Hose and holds it in place. The unique one piece patent pending design allows for quick, simple, and easy installation. It will not rust because it's molded from the same choice TPE Material of some of our other products that you've come to know and trust.

Available for surface mount, or strut mount.

CUSHIONED CLAMPING SYSTEMS

CUSH-A-CLIP

(See Page 11)

Cush-A-Clip is a simple, economical lightweight hanger for supporting tubing. The secure but non-tightening design allows for expansion, greatly reducing joint fractures

CUSH-A-GRIP

(See Page 12)

Cush-A-Grip non-metallic strut clamps allow quick and easy corrosion resistant attachment of pipe, tube, and hose to Z-Strut support channels. They offer a cost effective alternative to metallic clamps.

CUSH-A-STRIP™

(See Page 13)

CUSH-A-STRIP™ is manufactured from a thermoplastic elastomer, Cush-A-Strip™ is designed for use from -50°F to 275°F.

Cush-A-Strip™ is designed for use with standard steel clamps ranging from 1/4" tube to 6" pipe and is packaged in 20 Ft. rolls in an E-Z dispenser box.

The special locking lip edges ensure that Cush-A-Strip™ will remain in place with a balanced grip.

AIRSTRIP™

(See Page 14)

The **AIRSTRIP™** is designed to dampen the noise and vibration that can occur between piping or duct work and the supporting channel. Made from 64 durometer Santoprene, the AIRSTRIP™ is light weight, dependable, and long-lasting.

ALPHA SERIES™

(See Page 16)

ALPHA SERIES™ – Designed for the tough jobs, the Alpha Series™ U-Bolt Assembly secures pipe runs to any flat surface. The cushion design provides total load distribution, allowing the U-Bolt to become a full contact hanger, eliminating knife-edge loading.

The U-Bolt traps and secures the cushion in place to prevent lateral movement, while nylon insert locknuts provide a positive lock. Available in electro-galvanized steel or 316 stainless steel.

The Cushion is a thermoplastic elastomer.

Porce-A-Clamp™ Replaces Porcelain and Maple Cable Clamp. Assembly consists of thermoplastic elastomer cushion with plated or stainless steel clamp. Plated steel and stainless are both supplied with Silicon Bronze bolt and nut used to breakup the magnetic field around the cable at the clamping location.

Porce-A-Clamp™ offers a convenient alternative to troublesome porcelain since it is made from non-breakable material.

PORCE-A-CLAMP™

(See Page 17)

FLAME RETARDANT PRODUCTS

ZSi-Foster offers flame retardant options for many of the clamping products. They are available in two different types of cushion. The Flame Retardant/High Hardness cushion is designed for applications such as wire and cable insulation, electrical connectors, seals, gaskets and boots. The Halogen-Free/Flame Retardant cushions contain an optimal combination of rubbers and thermoplastics reactively combined with non halogenated flame retardant additives.

Flame retardant options are indicated by the logos shown below.

A NEW BREAKTHROUGH IN CUSHIONED CLAMPING DEVELOPED BY INDUSTRY LEADER ZSI

Cush-A-Nator
"Cool Blue"

Cush-A-Nator
Standard

The Cush-A-Nator® cushion is manufactured in the United States and made from a new incredibly durable thermoplastic rubber that resists high heat and provides longer life against vibration fatigue. The Cush-A-Nator is made from a proprietary thermoplastic vulcanized material cross-linked with high performance rubber and thermoplastic elastomers, which produces the highest operating temperature range in the industry.

Patent Pending

The Cush-A-Nator® is designed to provide the user with a choice of the highest heat range resistance of any cushion on the market or simply the advanced features of a superior design.
The Cush-A-Nator® is designed and manufactured in Michigan.

Features

A Thumb Drive

The Cush-A-Nator® has the exclusive "Thumb Drive" that provides the installer a gripping point to easily open the cushion with the help of leverage tabs and a living hinge. Easy and effortlessly to install.

B Self-Alignment

Cushion can be opened and placed over the pipe or tube and rotated into place while on the channel and automatically aligned with the channel opening ready for clamping.

C Pressure Control

The Cush-A-Nator® cushion has a built in squeeze control as part of the cushion design. The side opening and the squeeze control tab provides evenly distributed pressure around the tube or pipe.

D Complete Clamping Unit

The Cush-A-Nator® is the only strut mounted cushion that is mechanically connected to the supporting steel clamp because the bolt passes through the squeeze control tab forming the single unit connection. This design helps prevent the cushion from excess vibration by being attached directly to the clamp.

Installation examples shown on page 8

Cush-A-Nator® “Cool Blue” has service temperatures of -65°F to 340°F (-53°C to 170°C).

Cush-A-Nator® standard has an operating range of -50°F to 275°F (-45°C to 135°C).

Cush-A-Nator® – New Installations

Cush-A-Nator® – Retrofit / Replacement Applications

A key feature of the Cush-A-Nator® is this ability to place the cushion and rotate into position. *Perfect for retrofit applications!*

Retrofit - The Common Problem

Replacing a cush-a-clamp within a long pipe run poses a problem. Clamps before and after the one to be replaced prohibit the pipe from being raised so that the new cushion can be installed correctly. All too often a work-around is used which compromises the connection.

Retrofit - The Perfect Solution

Step 1: Remove Bad Cushion.

Step 2: The Cush-A-Nator can be installed without raising the pipe. The unique "Thumb Drive" allows you to rotate the Cush-A-Nator into position.

Step 3: Rotated into place while on the channel and the Self-Alignment tab automatically aligns with the channel opening ready for clamping.

Step 3: Add Pipe Clamps and tighten the assembly.

Rotate into Position

Thumb Drive

"Self-Alignment"

Gold Electro-Galvanized Steel

Stainless Steel

A patented "Living Hinge" allows the cushion to be spread apart for quick, easy installation.

CUSH-A-CLAMP® — Channel mounted clamping systems are ideal for multiple line runs, while absorbing shock and vibration, reducing unwanted noise and preventing galvanic corrosion. Cush-A-Clamp® fits any standard 1-5/8" wide channel.

Assembly consisting of steel clamp with locknut and thermoplastic elastomer cushion. All parts are marked for easy identification and packaged for small lot or bulk use. When specified, Cush-A-Clamp® assemblies up to 2", are available individually packaged.

Controlled Squeeze Shoulder Bolt

THE CLAMP — Features a unique shoulder stud which is securely fastened to one clamp half. Steel clamps for tube sizes up to 1-3/8" have the "Controlled Squeeze™" design which eliminates over-tightening and rotation while a nylon-insert nut assures a positive lock. Clamps are available in steel (with electro-dichromate finish), and stainless steel type 304. (Contact factory for type 316).

THE CUSHION — Made from a thermoplastic elastomer, it's built tough to withstand the effects of most oils, chemicals and industrial cleaning compounds, in temperatures from -50°F to 275°F. Interlock edges and channel locator legs ensure that the cushion remains in place.

INSTALLATION — One man, one tool time savings. Retrofits can be added without disassembly. A patented "Living Hinge" allows the cushion to be spread apart for quick, easy installation on sizes from 1/4" through 1-3/4".

CUSH-A-CLAW

Strut Mounted

Insert	Twist & Lock	Position Pipe	Snap In

Surface Mounted

Position	Mount w/Screw	Position Pipe	Snap In
Side grooves provide Centering guide	Counter-sunk hole allows tightening of any type of #10 fastener		

The Cush-A-Claw Grabs on to your Tube, Pipe, or Hose and holds it in place. The unique one piece patent pending design allows for quick, simple, and easy installation. It will not rust because it's molded from the same choice TPE Material of some of our other products that you've come to know and trust.

- Easy Snap-in Installation of Tube, Pipe, or Hose
- Sure Grip Strut Base easily rotates into strut
- Will not Rust
- Non Conducting
- Saves Time and Money
- Temp Range: -50° to 275° F
- Works Great Indoors or Outdoors
- Six Sizes of Tube and Three Sizes of EMT
- Designed for Light Duty Loads and Applications
- Prevents Galvanic Corrosion of Dissimilar Metals
- An Excellent Alternative to Steel, Stainless Steel, or Galvanized Clamps.

75 Lbs. Load
(safety Factor 3)

Cush-A-Claw® is manufactured under U.S. patent D631739

- Manufactured from polyamide alloy
- U.L. Rated
- Sizes from 3/8" to 1 1/8"
- One piece design makes installation a snap.
- No nuts to tighten, no parts to lose.
- Temperatures from -40°F to 275°F
- Secure but non-tightening design allows for expansion, greatly reducing joint fractures

A SIMPLE, ECONOMICAL,
LIGHTWEIGHT HANGER FOR
SUPPORTING TUBING

GATOR-LOK
HVAC Terminal Repair Kit

Our patented design was made to be one-of-a-kind with not 1 but 2 layers of "Lok"ing technology. Constructed with 10 gauge, 30 inch copper-wire leads.

- Two layers of "Lok"ing technology
- No need for tools
- Easily replaces damaged wire leads
- Installs in under five minutes
- Part number is GL-1000

Patent #: 7854635

CUSH-A-GRIP

Multi-size adjustment capability allows four clamp sizes to fit fifteen sizes of tube and pipe. Comes complete with stainless steel bolt and captured nut hardware.

FEATURES

- Ten sizes of tube, five sizes of pipe
- Diameters from .25" to 1.31" (6mm to 32mm)

ADVANTAGES

- Reduces inventory SKU's
- Simplifies take-offs and requirements on projects using both tube and pipe sizes
- Easy installation, Non conducting
- Permissible outdoors
- Temperature range: -40°F to +380°F
- No galvanic reaction, Will not rust

BENEFITS

- Lowers overall inventory costs
- Works with screw or nut driver
- Resists vibration
- Use in place of steel clamps with steel tube
- Multi-environmental
- Covers a wide range of applications and maintains thermal barrier
- For use on copper tube
- Use in place of stainless, aluminum, PVC or hot dipped galvanized clamps

- Manufactured from a thermoplastic elastomer, Cush-A-Strip™ is designed for use from -50°F to 275°F.
- Easy Stocking – Packaged in 20 foot rolls in an E-Z dispenser box for convenience in handling and storage. **Cush-A-Strip™ roll part number is S-716**
- Easy Measuring – Marked in 1/4" increments for fast measuring and cutting, while eliminating waste.
- Lock-lip edges ensure that Cush-A-Strip™ will remain in place with a balanced grip.
- Clamps ordered separately. They are available with a standard bolt and nylon lock nut in steel (electro-dichromate), and stainless steel, in sizes ranging from 1/4" tube to 6" pipe.

(1) Cut appropriate length strip using the cutting schedule shown on right.

(2) Place the pipe on the Cush-A-Strip™

(3) Insert the clamps in the strut

(4) Tighten the clamps.

* Gold Plated Steel Clamps Supplied with Fixed Stud and Nylon Lock Nut
 * Stainless Steel Clamps Supplied with fixed Stud and Nylon Lock Nut from 1/2" through 1-3/4" Sizes and 1-7/8" through 6-7/8" Sizes are supplied with a Loose Bolt and Hex Nut

AIRSTRIP™, CUSH-A-GLIDE™

AIRSTRIP™

The AIRSTRIP™ is designed to dampen the noise and vibration that can occur between piping or duct work and the supporting channel. Made from 64 Durometer Santoprene, the AIRSTRIP™ is light weight, dependable, and long-lasting.

- Temp Range: -40°F to 250°F (-40°C to 121°C)
- Available in 10' lengths
- Santoprene UL94HB rated
- Made in USA

Part No.	Max. Load Lbs. per Lineal In.		Length	
	Lbs.	(kg/25.4mm)	Ft.	(m)
AS1	40	18.1	10	3.05

CUSH-A-GLIDE™

Cush-A-Glide is designed for fast installation of copper tube or pipe, and can be easily installed in seconds with fasteners of your choice.

- Allows for expansion and contraction of copper tube and pipe
- Excellent alternative to stainless or galvanized clamps
- Fits tightly and securely against mounting surfaces
- Made from trusted high quality TPE material
- One piece molded split ring design
- Suitable for indoor or outdoor applications
- Temperature range of -50°F to 275°F (-45°C to 135°C)
- Will not rust and prevents and eliminates galvanic corrosion
- Made in the USA

Step 1: Spread open Cush-a-Glide, and place it over tube, pipe, or hose

Step 2: Secure one side of Cush-a-Glide with a fastener of your choice

Step 3: Simply glide tube or pipe through the Cush-a-Glide to desired position

Step 4: Fasten second side of the Cush-a-Glide

Gold Electro-Galvanized Steel

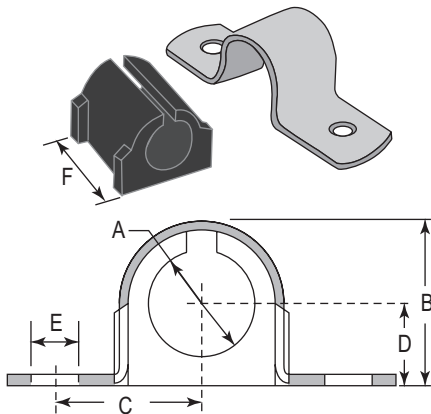

Stainless Steel

The Omega Series™ clamp assembly retains, guides, protects and uniformly spaces line runs. Attached with two standard fasteners to any flat surface, the Omega Series™ clamp eliminates the use of special channels, providing a savings in both space and cost. They go up fast, lines are rigid and look neat.

THE CLAMP — Steel with electro-dichromate finish, or stainless steel type 304.

THE CUSHION — Manufactured from a thermoplastic elastomer, it's built tough to withstand the effects of most oils, chemicals and industrial cleaning compounds, in temperatures from -50°F to 275°F. Interlock edge ensures that the cushion remains in place.

Assembly consists of clamp and thermoplastic elastomer cushion. Fasteners not included.

ALPHA SERIES™

Designed for the tough jobs, the **Alpha Series™** U-Bolt Assembly secures pipe runs to any flat surface. The cushion design provides total load distribution, allowing the U-Bolt to become a full contact hanger, eliminating knife-edge loading. The U-Bolt traps and secures the cushion in place to prevent lateral movement, while nylon insert locknuts provide a positive lock.

Alpha Series™ U-Bolt Assembly conforms to MIL-S-901D for shock testing.

1/2" thru 6" assembly.

8" thru 12" assembly - Two piece cushion design

The hinged cushion allows easy installation of the wire, but the components will not get separated and lost or broken.

Replaces Porcelain and Maple Cable Clamp. Assembly consists of thermoplastic elastomer cushion with plated or stainless steel clamp. Plated steel and stainless are both supplied with Silicon Bronze bolt and nut.

- Non-breakable material
- Chemical and UV resistant
- **U.L. Listed** - Burning stops within 10 seconds after two applications of ten seconds each of a flame to a test bar with no flaming drips.
- Plated Steel, or Stainless steel clamps
- Tapered flange to protect cable
- Dielectric strength 640 volts per mil
- One piece cushion design, available with Flame retardant / Halogen Free cushions
- Silicon Bronze Hardware used to Breakup the Magnetic field around the Cable at the Clamping Location.

INSULATION SADDLE

The Saddle-Up Pipe Insulation Saddle is a formed metal shield designed to allow insulated refrigeration pipe or tubing to pass through the support without need to compromise the vapor barrier and protects from crushing or damage at hanger and support locations. Made from 20 gage electro-galvanized steel the ribbed design along its 12 inch length offers the superior support needed to spread out loading on insulation which reduces the potential for internal cavity creation between the pipe and insulation. The Z-Strut mounting option provides a time tested secure and safe attachment method so there is no need for other tie downs to the support.

OTHER FEATURES INCLUDE:

- Shipped with all necessary hardware to attach to Z-Strut or any other industry standard 1 5/8" wide strut channel.
- Features flared edges to protect pipe insulation jacketing.
- Each Saddle individually marked with part number
- Counter Sunk attachment Hole and Flat Head Machine Screw prevent possible damage to insulation.
- Electro-Galvanized Steel provides excellent rust protection and has no exposed fabricated edges.

AIRTIGHT CRUSH-RESISTANT INSULATION CLAMP

Cush-A-Therm™ Clamp is a perfect crush-resistant airtight seal for chilled refrigeration or mechanical pipe lines that require continuous insulation.

The rigid foam construction has an insulating tape inner lining which supports tube and absorbs vibration of operating pipe lines.

The outer cover consists of a special rubber coating which seals the cushion after installation in order to prevent condensation.

It's strong closed-cell structure is ideal for liquid cooling lines to prevent condensation, save energy, and maintain the vapor barrier.

NOTE: Complete assembly supplied with gold electro-galvanized channel clamp and hardware

FEATURES

- Temperature range: -70°F to +250°F (-200°C to +125°C)
- Flammability is Self-Extinguishing as tested under ASTM D 635
- Maintains thermal barrier protection
- Prevents condensation
- Properly supports pipe and tube
- Absorbs vibration
- Polyurethane foam laminated with a rubber lining

AIRTIGHT CRUSH-RESISTANT INSULATION CLAMP

INSTALLATION IS AS EASY AS 1-2-3!

1. Insulation slides over pipes. Self adhesive surfaces provide seal.

2 Put in place and glue to insulation.

3. Wrap and seal with ProTape.

Cush-A-Therm

v.s. Plastic Alternative

ASHRAE Insulation Recommendations

Cush-A-Therm is designed to meet the ASHRAE recommendations for insulation for mechanical systems which indicate that insulated pipe hangers should provide the following:

1. Complete sealing of pipe against water vapor ingress
2. No energy transfer of cold to supporting clamp to prevent condensation of water and possible growth of mold. If the support incasing the insulation is in contact with the pipe or tube and supported by a metallic clamp, which is not protected by insulation, below ambient temperatures will be transfer to the clamp causing energy transfer and condensation.
3. No interruption of the insulation envelope
4. Limit or avoid compression at support location

ASHRAE Section 23.13-23.14 further states “when the goal is avoiding compression of low-compressive-strength insulation products, it is recommended to use high-strength insulation inserts made of a product that offers the desired compressive strength and other necessary performance properties. Other higher-strength materials that are not thermal insulation material and interrupt the insulation envelope, or do not allow complete sealing of an insulation system against water vapor ingress are not recommended for supporting insulated piping on pipe hangers. Note that wood blocks have poor thermal conductivity and are not recommended, especially for cold pipe systems.”

Insulated cold piping should receive special attention when exposed to ambient or unconditioned air. The Cush-A-Therm is a product that seals out air, and insulates the pipe/tube from the supporting clamp, and is therefore in compliance with the 2013 ASHRAE insulation recommendations.

CAL-CLAMP CRUSH RESISTANT INSULATION

MODEL "HW" - For Hot or Cold applications

- Works equally well on both hot and cold lines.
- Includes the strut clamps required for installation with strut.
- Special order insulation lengths, double sheet metal wrap, load bearing plates and alternate sheet metal gauges are available upon request.

MODEL "CWP" - For applications requiring a wet lag insulation

- Insulations extends 1" beyond sheet metal.
- The minimum length for our "CWP" insert is 6" .
- Includes the strut clamps required for installation with strut.
- Special order insulation lengths, double sheet metal wrap, load bearing plates and alternate sheet metal gauges are available upon request.

QUICK-CLIP

Quick-Clip's unique one-piece composite polyamide alloy design combines strength with light weight. It will overcome the problems of using cable ties for piping, electrical, optical and network cabling

- Quick Clip locates easily on 3/8" rod
- No breaks in insulation material
- Fast and easy installation, saves time and money
- Single handed installation
- Manufactured from a composite polyamide, tested from -40°F to + 275°F, (-40°C to +135°C) makes it ideal for network cables
- Studding panel inserts.

Slide onto threaded rod, twist to engage. Insert pipe and clip to lock.

Part No.	CLAMPING RANGE				Condensate Drain
	Standard Copper	Metric Copper	Copper Tube		
	(no insulation)		with 3/8" Insulation	with 1/2" Insulation

QC34	2 1/8"	54mm	1 3/8" tube	1 1/8" tube	yes

Inside diameter: Certain clips have two or more positions to accommodate both metric and standard sizes

CUSH-A-CLICK

The great advantage with the **Cush-A-Click** is it retains an unbroken vapor barrier seal, eliminating the problem of sweating on metal fittings. The Cush-A-Click is ideal for the installation of refrigeration systems allowing the barrier seal to run the length of the pipe work without cutting the insulation material. The Cush-A-Click quickly secures both the pipe and the insulation.

- Time and labor savings
- Simple, secure installation of refrigeration and plumbing pipe work
- No break insulation material
- Corrosion resistance
- Light weight

SPN LOOP CLAMPS

SPN LOOP CLAMPS

PLATED STEEL LOOP CLAMPS, 1/2" WIDE

FEATURES:

- Light to medium duty steel clamp
- E.P.D.M. cushion for electrical insulation and vibration absorption
- Steel clamps are zinc electroplated for corrosion resistance
- Some sizes available in aluminum. Contact factory for details.
- Temperature range -50°F to +275°F (-45°C to 135°C)

SPH LOOP CLAMPS

SPH CLAMP

CUSH-A-RING

The Cush-A-Ring is a unique rubber lined hanger for copper and steel tube or pipe. The SPH-1 thru SPH-10 is a two-part clamp that has a hinged side with a single screw patented locking system. The quick locking system is easy to close with one hand which makes it easier and faster for installation. The noise insulating rubber lining is made of UV-resistant EPDM rubber. The Cush-A-Ring is zinc plated for corrosion resistance.

FEATURES:

- Rubber lined, noise insulated
- With quick locking system
- Clamp easy to close with one hand
- UV-resistant black EPDM rubber lining
- Zinc plated
- ASTM E-84
- Meets - Buy America Act

The Cush-A-Ring is a unique rubber lined hanger for PEX, CPVC, and PVC pipe. The SPP-1 thru SPP-10 has a two-part clamp with a hinged side and a single screw patented locking system. The quick locking system is easy to close with one hand which makes it easier and faster for installation. The noise insulating rubber lining is made of UV-resistant EPDM rubber. The Cush-A-Ring is zinc plated for corrosion resistance.

FEATURES:

- With quick locking system
- Clamp easy to close with one hand
- Specially formulated, green, UV and age resistant EPDM rubber lining
- Perfect for PEX, Fusion, CPVC and PVC pipe
- ASTM E-84
- Complies with MSS SP-58 and SP-69
- Material steel, zinc plated

SPP-1 thru SPP-9

SVN, SVW LOOP CLAMPS

SVN LOOP CLAMPS

VINYL DIPPED - GALVANIZED STEEL 1/2" WIDE

FEATURES:

- Medium duty steel clamp that can be slipped over a tube or wire and closed with a bolt at assembly. Holes provide easy alignment. Its pre developed shape allows for proper closing and excellent fit of the clamp.
- Galvanized Steel
- PVC coated, black color
- Temperature range -25°F to +160°F

PYTHON CABLE CLAMPS

PYTHON SERIES

STRONG: Load is applied at right angles to ensure tight fit. Python hose clamps keep their grip on the hose and can be reused. Rolled up band edges ensure a smooth transition between band and hose. Hexagonal screw head with drive slot makes for easy accessibility.

The **Python II** provides greater clamping force with less trouble than heavy-duty T-Bolt type clamps.

- Lower cost than T-Bolts with superb performance.
- Thicker band for greater tensile strength.
- Greater clamping range than T-Bolt 1½" clamping range over 2" diameter
- Zinc plated or 304, 316, or 430 stainless steel
- Non perforated band with embossed threads safely seals without cutting the hose.

Cush-A-Block Features:

- 100% Recycled Rubber
- Qualifies for LEED Credits
- Meets the Buy America Act and American Reinvestment Recovery Act (A.R.R.A.)
- Resistance to Freeze and Thaw
- Reflective Eco-Green Stripes for Easy Visibility
- Dampens Vibrations
- Compatible With Most Rooftop Materials
- Easy to Change Strut Without Moving or Lifting Block
- Strut is Available in Corrosion Resistant Stainless Steel and Aluminum

The channel for Cush-A-Block support assemblies includes a variety of options. The strut can be made in special lengths, finishes, and alloys including Aluminum, Stainless Steel both 304 & 316, PVC coated, Powder coated, Zinc Trivalent Chromium, Pre-Galvanized and Hot Dipped Galvanized.

Cush-A-Block Support Applications:

- Solar Racking
- Pipe & Conduit Supports
- HVAC, Duct, Cable Tray Supports
- Air Conditioning Supports
- Roof Walkway Supports

Embedded fastener reduces time to install or change strut. Use 3/8" x 1" bolts

Built in channel guide to easily install strut straight.

Eco-Green Reflective Safety Strip is molded into the block, and will not flake or peel.

Embedded nut eliminates any thru holes and prevents leaks or any rust from forming on the underside of the fastener.

Handgrip makes it very easy to move blocks.

Built in slot will allow water to flow and not get trapped. Avoids water or ice dams buildup.

CUSH-A-BLOCK - CBN SERIES

PLAIN BASE

The CBN-Base Rooftop Support is UV resistant and suitable for installation on most types of roofing material or other flat surfaces. Can be used as a curb (sleeper) replacement. Screw fasteners can be used to attach one or two hole pipe straps or a piece of strut (not included).

CBN-Base Series		
Part No.	Weight	Uniform Load Capacity (Lbs) *
CBN	3.2 lbs.	2,500 *

* This load is only for the capacity of the components in this assembly. Please consult roofing manufacturer or engineer for roof load capacity.

CUSH-A-BLOCK - CBN-BR BRIDGE SERIES

SUPPORT WITH CHANNEL

Like all of the Cush-A-Block supports, the CBN-BR Bridge Rooftop Supports are perfect for supporting natural gas and refrigeration piping systems, cable tray, electrical conduit, multiple lines, HVAC equipment and many other applications.

The CBN-BR Series provides a longer mounting surface with strut lengths up to 60". Custom lengths are available upon request.

Standard strut mount pipe clamps are used to secure the pipes.

CBN-CB-Bridge Series Bridge Length Supports with 2 CBN Bases and Strut				
Part No.	Strut Length	Total Length	Weight (Lbs)	Uniform Load Capacity (Lbs) *

Part No.	Height	Strut Size	Weight (Lbs)	Uniform Load Capacity (Lbs) *
CBN8EX	8"	1 3/16"	5.3	1,000 *
CBN12EX	12"		5.7	1,000 *
CBN16EX	16"	1-5/8"	12.7	2,000 *

* This load is only for the capacity of the components in this assembly. Please consult roofing manufacturer or engineer for roof load capacity.

CUSH-A-BLOCK - CBN-PRB SERIES

SUPPORT WITH PIPE ROLLER

The CBN-PRB Rooftop Supports are designed for superior support of natural gas and refrigeration pipes. The roller allows for longitudinal movements of the pipe. This support is suitable for most types of roofing material or other flat surfaces.

CBN-R-Roller-Series With 1 5/8" Pre-Galv. Steel Channel With Rollers						
Part No.	R Pipe Size (O.D.)	Height	Overall Height to Roller Center	Base Length	Weight (Lbs)	Uniform Load Capacity (Lbs) *
CBN1PRB	1" to 2"	8"	7"	10-1/2" (1-Base)	7.5	2,500 *
CBN2PRB	2" to 3-1/2"				7.3	2,500 *
CBN3PRB	4" to 6"	8-1/8"	7.8		2,500 *	
CBN4PRB	8" to 10"	10-5/16"	8-1/4"	24" (2-Bases)	18.1	2,500 *

* This load is only for the capacity of the components in this assembly. Please consult roofing manufacturer or engineer for roof load capacity.

CUSH-A-BLOCK - CBN-RB SERIES

SUPPORT WITH RAISED BRIDGE MEDIUM SUPPORT

The CBN-RB Medium Rooftop Supports can support natural gas and refrigeration piping systems, cable tray, electrical conduit, multiple lines, HVAC equipment and many other applications. They are designed for rooftop applications requiring a heavier load bearing capacity, and are suitable for most types of roofing material or other flat surfaces. Custom lengths are available upon request.

Standard strut mount pipe clamps are used to secure the pipes.

Raised Bridge Medium Support With 2 CBN Bases & 1 5/8" Pre-Galv Steel Channel					
Part No.	Total Width	Strut Width	Base Length	Weight (Lbs)	Uniform Load Capacity (Lbs) *
CBN1RB	18.65"	12"	10-1/2"	16.2	3,000 *
CBN2RB	30.65"	24"		17.9	1,500 *

* This load is only for the capacity of the components in this assembly. Please consult roofing manufacturer or engineer for roof load capacity.

CUSH-A-BLOCK - CBN-RB SERIES

SUPPORT WITH RAISED CHANNEL HEAVY SUPPORT

The CBN-RB Heavy Rooftop Supports is designed for rooftop applications requiring a heavier load bearing capacity. It is suitable for most types of roofing material or other flat surfaces. Custom lengths are available upon request.

Standard strut mount pipe clamps are used to secure the pipes.

Raised Bridge Heavy Support With 2 CBN Bases & 3/4" Back-to-Back Pre-Galv Steel Channel				
Part No.	Total Width	Strut Width	Weight (Lbs)	Uniform Load Capacity (Lbs) *
CBN3RB	30.65"	24"	27.4	3,500 *
CBN4RB	42.65"	36"	29.8	3,250 *

* This load is only for the capacity of the components in this assembly. Please consult roofing manufacturer or engineer for roof load capacity.

CUSH-A-BLOCK - CBN-DS SERIES

ADJUSTABLE WIDTH DUCT SUPPORT

The CBN-DS Series is designed specifically for supporting duct work. The telescopic cross beam provides easy width and height adjustments.

A wide range of support widths are provided from 19-¹/₄" to 103-⁵/₈"

Standard strut mount pipe clamps are used to secure the pipes.

CBN-DS-Duct Support Series With Adjustable Width and Height

Part No.	Width		Height	Weight (Lbs)	Uniform Load at Min. Width(Lbs) *
	Min.	Max.			
CBN1DS	19- ¹ / ₄ "	26- ³ / ₄ "	28.813"	26.4	1,909 *
CBN2DS	24- ⁷ / ₈ "	39- ⁷ / ₈ "		28.0	1,477 *
CBN3DS	38"	62- ³ / ₈ "		31.7	967 *
CBN4DS	62- ³ / ₈ "	103- ⁵ / ₈ "		38.5	589 *
CBN5DS	19- ¹ / ₄ "	26- ³ / ₄ "	36"	26.4	1,909 *
CBN6DS	24- ⁷ / ₈ "	39- ⁷ / ₈ "		28.0	1,477 *

CBN8DS	62- ³ / ₈ "	103- ⁵ / ₈ "		38.5	589 *

* This load is only for the capacity of the components in this assembly. Please consult roofing manufacturer or engineer for roof load capacity.

CUSH-A-BLOCK - CBN-DSFW SERIES

FIXED WIDTH DUCT SUPPORT

The CBN-DS Series is designed specifically for supporting duct work. The cross beam provides easy size adjustments. Custom lengths are available upon request.

Standard strut mount pipe clamps are used to secure the pipes.

CBN-DSF Duct Support Series With Fixed Width & Adjustable Height						
Model No.	Height	Width	Base Length	No. of Bases	Weight (Lbs)	Uniform Load Capacity (Lbs) *
CBN1-DSFW	23"	18"	24"	4	33.4	2042 *

PRE-CUT & HOLE PUNCHED STRUT FOR THE CUSH-A-BLOCK

MECHANICAL BLOCK

HYDRAULIC BLOCK

Refer to our Wesanco® Product Catalogs for Strut and Accessories that can be used with the Cush-A-Block®

All Wesanco is 1-5/8" Wide, With 7/8" opening

STRUT PRODUCTS

ZSi-Foster offers a line of standard strut channel and a variety of clamps tailored for use with strut. Cush-A-Clamp®, Cush-A-Therm™, and Porce-A-Clamp™ provide cushioned clamping solutions.

Complementing products are offered for quick connection of pipe, tube and hose to strut.

ZSi-Foster's family of cushioned clamps presented earlier in the catalog offer solutions for isolation of the pipes from vibration or thermal transfers. And, "fire retardant" and "fire retardant, halogen free" options are available.

CUSH-A-NATOR®
(See Page 6 - 8)

CUSH-A-THERM™
(See Page 20-21)

PORCE-A-CLAMP™
(See Page 17)

SADDLE-UP
(See Page 18)

CUSH-A-CLAMP®
(See Page 9)

ZSi-Foster's family of non-metallic strut clamps allow quick and easy attachment of pipe, tube, and hose to Wesanco support channels and are corrosion resistant. They are all a great and cost effective alternative to metallic clamps.

BETA CLAMPS - OVERVIEW

Beta Clamps are ideal for clamping pipe, tube, hose, and electric cables. They are an economical and easy way of securing them in all types of terrestrial, marine, O.E.M. and Industrial applications. Thanks to the advanced features and the breadth and depth of our product offering, Beta Clamps are used in all areas of industrial, mobile and marine hydraulics, general industrial pipe construction, the field of press technology, instrumentation and control technology and many more.

- Beta Clamps offer shock-absorption, vibration dampening and noise reducing properties.
- Beta Clamps feature a practical and economical design which make for quick, easy pipe installation and layout.
- Using weldable plates, it's easy to anchor the clamps to machinery and steel work.
- Fast, safe, economic installation and service in piping system.
- Upper and lower clamp half are identical.
- Ribs in clamp bore are designed to absorb shock and vibration in the direction of the tube axis.
- Due to their design the clamps can be easily cleaned.

CLAMP BODY

- Standard – Polypropylene (Green Color)
-22°F to 194°F (-30°C to +90°C)
- Aluminum is available for use in high heat applications

CLAMP COMPONENTS – The other metallic components of the clamps are manufactured in:

- Lower and upper plates: steel, stainless steel type 304
- Screw bolts: steel, S40C, stainless steel type 304
- Other metallic on request.

ZSi-Foster offers an installation option for all of your application needs.

BETA STANDARD (Pages 48-49)

- For standard hydraulics and systems with less than 1500 PSI without dynamic loads
- Polypropylene cushion
- Steel components

BETA HEAVY (Pages 50-51)

- For systems with greater than 1500 PSI operating pressure, operations with pressure surges, and applications with wide temperature fluctuations.
- Absorbs high levels of shock, noise, and vibration
- Polypropylene cushion & steel components

BETA TWIN (Pages 52-53)

- For standard hydraulics, general pipe construction and electrical cables
- Polypropylene cushion
- Steel components

BETA SMOOTHIE (Page 54)

- Reduces wear on hose connection caused by vibration and surge.
- Chamfered and smooth core protects hose cover and extends hose life.
- Uses Beta Standard hardware
- Polypropylene cushion
- Steel components

BETA SMOOTHIE TWIN (Page 55)

- Reduces wear on hose connection caused by vibration and surge.
- Chamfered and smooth core protects hose cover and extends hose life.
- Uses Beta Twin hardware
- Polypropylene cushion
- Steel components

BETA SPECIAL METALS (Pages 48-51) (ALUMINUM, STAINLESS STEEL)

- Aluminum cushions with steel components are used in high heat applications up to 500°F
- Stainless steel clamp hardware with polypropylene cushion are used in applications where external corrosion is a concern.

BETA RUBBER INSERTS (Pages 56-57)

- Available in standard and heavy
- One cushion block provides flexible size range of cushioning.
- Smooth bore core can be used on hose, or for vibration reduction

BETA ADAPTER (Page 58)

- Allows a clamping junction to be inserted into hydraulic lines.
- The adapter body is offered in two sizes for use with the Z-Clamp adapter inserts.

BETA CLAMPS - STANDARD

BETA CLAMPS

STANDARD SERIES

Steel w/
Polypropylene
Cushion

Steel w/
Aluminum
Cushion

BETA STANDARD SERIES

- Cushions are Polypropylene (Green Color)
- Recommended for systems with less than 1500 PSI without dynamic loads.
- Use for standard hydraulics, general pipe construction, electrical cables, and general duty piping applications subject to moderate levels of shock and vibration.
- Aluminum cushions and are used in higher heat applications up to 500 Degrees.

INSTALLATION - Refer to pages 115-116 for complete installation guide.

BETA CLAMPS - "SMOOTHIE"

BETA "SMOOTHIE"

STANDARD SERIES

Beta "Smoothie" is ideal for general-duty applications where there is a need to reduce wear on hose connection caused by vibration and surge.

- Chamfered and smooth core protects hose cover and extends the life of the hose
- Uses Standard Beta hardware
- Reduces wear on hose connection caused by vibration and surge

INSTALLATION - Refer to pages 115-116 for complete installation guide.

Group	Part No.	SAE 100R1 Hose Size	Dimensions (Inches)					WT/ 100	Bolt
			A1	A2	A3	H1	H2		
S2	S2004H	1/4" (0.53)	1.02	1.57	1.65	0.76	1.535	20	1/4 - 20 x 13/8

BETA CLAMPS

HEAVY RUBBER INSERT

INSTALLATION - Refer to pages 115-116 for installation guide.

- One block provides flexible size range of cushioning.
- Smooth bore core for hose, or vibration reduction
- Broad range of metric sizes.
- Maintains center line when used in groups.
- For high pressure hydraulics and heavy duty operations.
- Used for intermittent load and high oil speeds.
- Increase size range over standard series.

Note: Add Assembly type to Part No.- Example: **HM4006RIS** provides the complete assembly as shown

BETA ADAPTER

BETA ADAPTER

The **BETA-ADAPTER** allows a clamping junction to be inserted into virtually any hydraulic line. The exclusive square bodied junction adapter design can be used with metallic tubing or hydraulic hose ends. It provides a point of union for hydraulic runs which transition from one form of conveyance to another (i.e. hose to tubing). Once inserted into the customized Beta-Adapter clamp body, the junction point is securely clamped fighting the effects of vibration, insuring a leak-free system.

Group	A1	A2	A3	H1	H2	Hex Bolt
Group 1 H4 BETA	45mm 1.77	85mm 3.34	70mm 2.75	32mm 1.25	64mm 2.51	3/8"-16 x 2-1/4"
Group 2 H5 BETA	60mm 2.36	100mm 3.93	84mm 3.30	38mm 1.49	76mm 2.99	3/8"-16 x 2-3/4"

- Beta-Adapter cushions can also be used with rubber inserts.
- Z-Clamp split bushings from Group 1 can be utilized with the basic Beta-Adapter Group 4 cushion.
- Z-Clamp bushings from Group 2 coincide with Group 5 Beta-Adapter assemblies.
- The split bushings provide extra vibration absorption for delicate clamping surfaces.

INSTALLATION - Refer to page 117 for complete installation guide.

Z-CLAMP UNITS

The **Z-Clamp** is designed to maintain a consistent center line dimension for horizontal clamping or vertical stackable clamping applications. Z-Clamp maintains that center line while accommodating the same, or different diameter tubing, hose or pipe. Suited for all types of hydraulic hose, tubing, and pipe clamping applications, the Z-Clamp provides yet another alternative to the broadest cushion clamping product line in the world.

A Z-Clamp consists of an adapter framework which is offered in two versions. One has mounting bolts between each adapter insert and the other has two additional mounting bolts at each end of the frame.

Standard framework, bolts between each adapter

Z-Clamps can be stacked for even more line clamping ability.

Outside hole framework, bolts between each adapter and two additional bolts at each end

Z-CLAMP - STANDARD

Z-CLAMP - MULTIPLE LINE CLAMPING SYSTEM

STANDARD CLAMP UNITS

The standard Z-Clamp unit features an anchor bolt between each of the adapter inserts.

The junction adapter provides break points in lines allowing for shorter hose and tubing runs reducing leaks at connection points by securing the adapter against vibration within the Z-Clamp units. These break points may also serve as securely clamped changeover points between hose and tube, and vice versa.

- Stackable for space conservation
- Maintains consistent center line dimensions between lines both horizontally and vertically (in a stacking application)
- Mix and match pipe, tube, hose and junction adapters
- Suited for all types of hydraulic applications
- Available in standard and outside hole mounting configurations

INSTALLATION - Refer to page 117 for complete installation guide.

Note: Adapters and Hardware are ordered separately. Please see pages 62--64 for selection of these items.

GAMMA PADS

When installing pipe, tube, hose, or equipment the effects of vibration, shock, surge, galvanic corrosion and unwanted noise are a major concern. Improperly cushioned equipment, pipe, tube, or hose invites failure and potential problems. New developments in cushioned clamping and vibration isolation products from ZSi provide the proper solutions to combat these effects.

ZSi's products have earned a well-deserved reputation for unparalleled quality and effectiveness. As industry develops new needs, ZSi can and will respond with superior quality products and innovative solutions.

AC-18	18" x 18" x 7/8" Cork / Rubber AV Pad

ISO - CUBE

SOLID RUBBER TOUGH

Natural rubber pads designed to reduce vibration and noise emanating from refrigeration or AC equipment. Circular design offers a suction cup effect eliminating the need to bolt the pads down. A standard 18" pad divides into eighty-one 2" segments which may be cut or torn into smaller pads. The 50 durometer pads will withstand a load of 180 psi with great resiliency.

Part No.	Description
AS-2	2" x 2" x 3/4" Iso-Cube
AS-18	18" x 18" x 3/4" Iso-Cube

GAMMA EXTREME PAD

The **BEST** Performer E.V.A. (Extreme Vibration Attenuation) is the latest generation in vibration dampening technology. In the most severe vibration extremes, testing shows the E.V.A. pad outperforms cork and rubber by greater than 3:1 and outperforms our competitor's "waffle" pad by greater than 8:1! The enhanced performance comes from the special composite foam center which is structurally more sound than cork. E.V.A. is not affected by oils or chemicals that can break down cork and is much more effective at vibration dampening than solid rubber. Designed to withstand 50 psi. Choose E.V.A. to get the best of both worlds!

Part No.	Description
AV-2	2" x 2" x 7/8" EVA Pad
AV-3	3" x 3" x 7/8" EVA Pad
AV-4	4" x 4" x 7/8" EVA Pad
AV-6	6" x 6" x 7/8" EVA Pad
AV-18	18" x 18" x 7/8" EVA Pad

QUICK DETACHABLE COUPLERS

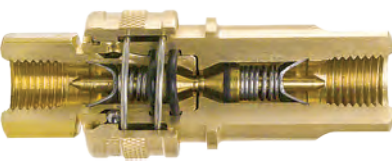

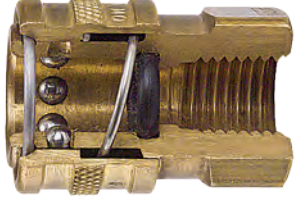

How to Select:

Proper coupler selection is important because of the variety of media for which they are used. All couplers consist of two basic components – a socket and a plug. The type of coupler varies by the valving arrangements in these two components.

Four basic factors should be considered to assure proper selection:

Type - Operation - Flow - Media

<p>Manual</p>  <p>Manual sockets require manual retraction of the sleeve to both connect and disconnect the plug. The "BL Series" is an optional feature available on manual sockets. After connection, the sleeve is rotated locking the coupler against accidental disconnect.</p>	<p>Automatic</p>  <p>Automatic sockets accept the plug by simple insertion into the socket and do not require retraction of the sleeve to connect. The "SL Series" is an optional feature on automatic sockets to prevent accidental disconnect. It is functionally the same as the "BL Series" on manual sockets.</p>	<p>Safety Coupler</p>  <p>Safety sockets are a variation of automatic operation. The socket accepts the plug by insertion. The sleeve is moved straight forward to lock and turn on the air. The sleeve is moved back by rotating first to the left and then to the right. This shuts off the supply line, exhausts the downstream line, and then releases the plug.</p>
<p>One Way Shut-Off</p>  <p>In a "One Way Shut-Off," only the socket has valving to shut off the flow when disconnected; it is, therefore, installed on the pressure side of the line. The plug has no valving and exhausts the downstream line at disconnect.</p>	<p>Two Way Shut-Off</p>  <p>The "Two Way Shut-Off" provides valving in both the socket and the plug, thereby shutting off flow at both of the disconnected ends. Originally developed for hydraulic lines, they are suitable for many other media because of the variety of metals and seal compounds offered.</p>	<p>Straight-Thru</p>  <p>"Straight-Thru" couplers, as the name implies, do not have valving in either the socket or the plug. Therefore, both ends of the line are exhausted at disconnect.</p>

Operation: Operation refers to the action required to connect and disconnect a coupler. Operation is a function of sockets only and does not vary for plugs.

Flow: The most important factor in properly sizing couplers is flow. Flow data is given throughout the catalog for industrial interchange design couplers, as well as many of BRECO's interchanges for competitors' non-standard designs. Where flow information is not shown, it is the same as the originating competitors' non-standard design. Most One Way Shut-Off non-standard couplers have the same flow as the same basic size industrial interchange design. All flows shown are for FPT couplers.

Media: The media flowing through the coupler will usually determine the type. Compressed air, many other gasses, and some liquids can be handled by One Way Shut-Off couplers. Hydraulic fluids as well as many other liquids and some gasses require Two Way Shut-Off. Straight-Thru couplers are suitable where there is no pressure in the line at connect or disconnect and loss of media at disconnect does not matter.

"B" SERIES SOCKETS

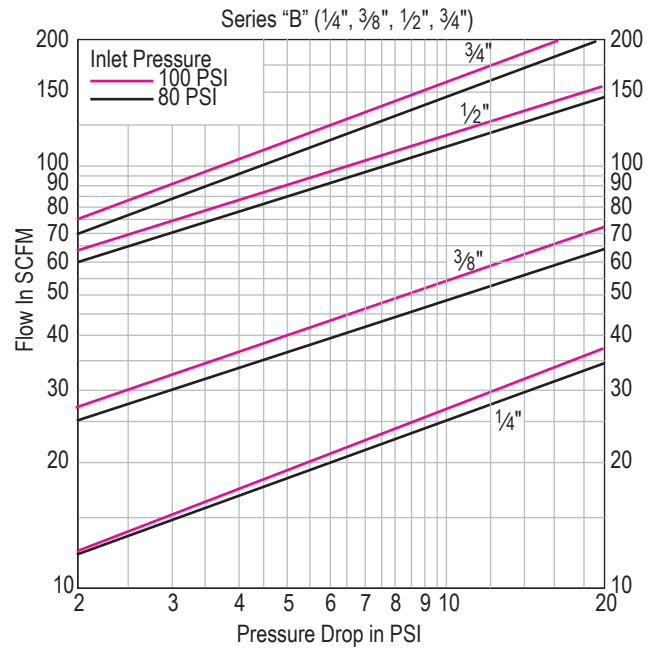

BRECO "B" Series couplers are designed for rigid mounting that allows a simple push-to-connect operation, constructed of a solid brass body and a steel valve. The "B" Series are mechanically interchangeable with the "C", "SV", "SVPC" & "D" Series, and similar industrial interchange couplings made by other manufacturers and accept plugs that conform to MIL-C4109-F. Plugs used with the "B" Series are the Industrial Interchange plugs that are found on page 77 of this catalog.

Sleeve-Lock Option (shown on right)

Sleeve-Lock feature locks manual socket against accidental disconnect. To connect, align ball with slot. After connection, rotate sleeve to lock. To disconnect, realign ball with slot and retract sleeve. Sizes available with sleeve lock are shown in the tables on following pages.

"C", "D" SERIES SOCKETS

Features:

1. High flow metal valves.
2. Precision molded seals form a "bubble tight" seal for reliable operation within rated working pressures. Nitrile (Buna-N) seals are standard. Ethylene Propylene, Viton and Neoprene seals are available as options with the "D" series.
3. Proven ball locking mechanism with large numbers of hardened steel or stainless steel locking balls evenly distribute the load to resist wear and provide positive connections and allows a swiveling action to reduce hose torque.
4. Integral sleeve guard protects the sleeve and resists accidental disconnects for the "C" series.
5. Knurling and/or grooves on the sleeve provide a gripping surface for ease of operation.
6. Wide range of body sizes, materials, options and end terminations are available to meet specific needs.
7. Accepts Industrial Interchange Plug.

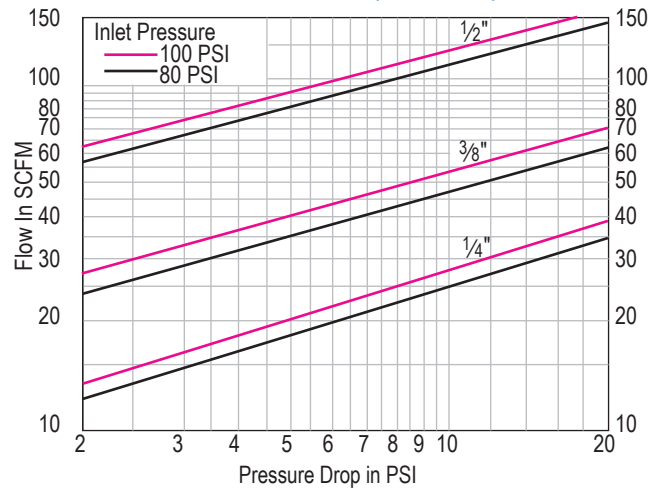

Operation:

Sleeve type couplings are widely used to connect air and low pressure fluid lines. Their compact and economical design uses a ball locking mechanism consisting of captive steel balls that engage the locking groove on the mating plug. The sliding spring loaded sleeve on the socket must be manually retracted in order to connect or disconnect the plug.

Performance:

"C" & "D" Series (1/4", 3/8", 1/2")

Material: Brass body and socket end, zinc-plated steel sleeve
 Working Pressure: 300 PSIG; vacuum to 26"Hg
 Interchangeability: Complies with ANSilicone/NFPA T3.20.14-1990 & ISO 6150-B

"D" Series Options:

Sleeve-Lock feature locks manual socket against accidental disconnect. Sizes available with sleeve-lock are shown in tables on following page.

SAFETY VENT - ZERO PRESSURE CONNECT AND DISCONNECT DESIGN

BRECO SV and SVPC Series Safety Vent couplings are designed for maximum user and equipment safety. BRECO SV and SVPC Series couplings allow for safe and easy connection/disconnection under zero line pressure to minimize the possibility of inadvertent disconnection and potential hose whip.

The fully encapsulated non-marring models significantly reduce the risk of surface nicks and scratches. Ideal for use in paint booth applications or for air lines used around finished surfaces, such as fiberglass, painted metal or glass surfaces.

Features:

- Made in the USA
- Rubber or polyurethane hose connections available
- Extra thick heat-treated steel walls extend service life
- Zero pressure connect/disconnect design vents down stream pressure for safe, easy connect/disconnect. It also minimizes possible inadvertent disconnection and potentially dangerous hose whip
- "O-ring" plug seal for leak-free performance
- No replacement parts used (valve, spring, or washer) that could block flow of air.
- Silicone-free assembly.
- Meets ISO 4414, 9.6 Quick-Action Couplings requirements: Quick-Action (quick release) couplings shall be selected so that when they are coupled or uncoupled
 - a) the coupling shall not be forced apart in a hazardous manner
 - b) compressed air particles shall not be expelled in a hazardous manner
 - c) a controlled pressure-release system shall be provided where a hazard may exist.

Specifications

Material: Zinc-plated steel, Acetal Copolymer outside cover, Steel internals

Seal: Buna-N

Working Pressure: 300 PSIG; vacuum to 26"Hg

Body Sizes: 1/4" to 3/4" Industrial Interchange Design

Connection Sizes: 1/4" to 1" NPT; 1/4" to 3/4" Hose Barb

Interchangeability: Complies with ANSilicone/NFPA T3.20.14-1990, ISO 6150-B, & ISO 4414

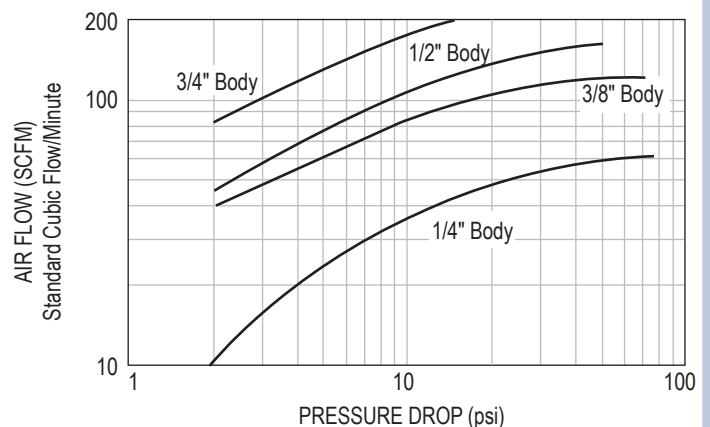

Rated Pressure: 300 psi

Temperature Range (std seals): 0° to +150° F

Locking Device: Stainless Steel Balls

Force required to Connect: Less than 10 lbs

Performance – "SV", "SVPC" Series (1/4", 3/8", 1/2", 3/4") Pressure Drop/Flow Performance Curves @100 PSIG Inlet

"SV" & "SVPC" SERIES [SAFETY VENT, INDUSTRIAL INTERCHANGE]

INSERT PLUG – OUTPUT IS ZERO PRESSURE

1 Make sure sleeve is fully retracted to allow insertion of the plug. Output pressure is zero at this point.

PLUG IS LOCKED IN PLACE, NOW RESTORE OUTPUT PRESSURE

2 Make sure sleeve is fully extended to allow pressure on the output plug

SYSTEM UNDER PRESSURE (BOTH SOURCE AND OUTPUT)

3

REMOVE PRESSURE FROM OUTPUT -- ACTS AS A SHUT-OFF VALVE --

4 Output Pressure is Released

Vent Holes release pressure to eliminate "Hose Whip", and make the coupler "Self Cleaning"

Twist grip up & slide back to release pressure

REMOVE PLUG – OUTPUT PRESSURE IS AUTOMATICALLY ZERO

5 Since output pressure is zero, and coupler is in release position, Plug can be removed

Operation:

SV and SVPC Series Safety Vent couplers are nearly effortless to connect and great for hose use. They are also especially useful for single-hand operation when they are mounted to hard lines such as an overhead air drop.

Once inserted into the SV or SVPC socket, the plug is lightly gripped and will stay in place allowing the operator to use the same hand to slide the sleeve straight forward to the "on" position.

SV or SVPC Series sockets can also be used as a 3-way valve to turn off the flow of air and exhaust the downstream pressure without disengaging the plug. By turning and sliding the sleeve to the "exhaust" position, downstream air pressure is relieved but the plug remains locked in place. Turning and sliding the sleeve in the opposite direction allows air to flow again.

BRECO SV or SVPC Series couplers are the ultimate solution to accidental disconnect hose whip dangers.

PUSH-BUTTON & "L" SERIES

PUSH-BUTTON SAFETY VENT SERIES

ZERO PRESSURE CONNECT AND DISCONNECT DESIGN

Features

- Industrial Interchange, Pneumatic Application
- Anodized Aluminum Body for long life
- Swivel body to keep hose untangled
- Push twice for release. First push vents, second releases
- Button, Valve & Venting Ring: Hardened zinc plated steel
- Springs, Balls: Stainless Steel
- ISO 4414 Norm
- Flow capacity: 37SCFM (at 90 psi with connected insert)
- Max working pressure: 175 psi (safety factor 4:1)
- Recommended working Temperature: 0°F - 160°F

		3/8"	SPB4304	Safety Push Button MPT

Note: Breco approved components (May be imported)

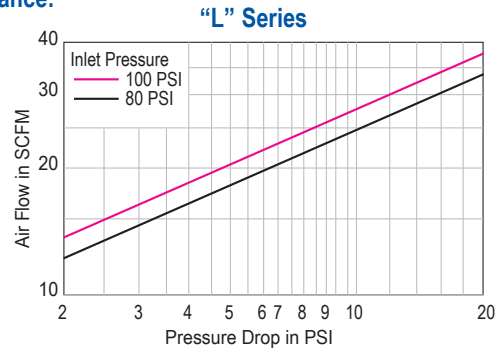

"L" SERIES - [INTERCHANGE WITH LINCOLN LONG NOSE]

BRECO "L" Series couplings are interchangeable with Lincoln's "Long Nose" series couplings. They are only available in 1/4" body size, brass and steel construction.

Specifications:

- Rated Pressure (psi): 300
- Temperature Range (std seals): -40° to +250°F.
- Locking Device: Balls or pins

Performance:

INDUSTRIAL INTERCHANGE PLUGS

BRECO Industrial Interchange plugs mate with sockets which conform to MIL -C4109-F. They are for use with any BRECO "B", "C", "D", "SV", "DM" & "SVPC" Series sockets. The industrial Interchange Plugs are completely interchangeable with similar plugs manufactured by other quick coupling manufacturers conforming to MIL-C4109-F requirements.

Hardened wear points (*Steel plugs only*) and solid barstock construction provide long service life. Precision machined surfaces and hardened load bearing areas resist the efforts of mechanical shock in the most rugged applications.

"U" SERIES - [UNIVERSAL COUPLER]

BRECO PNEUMATIC UNIVERSAL COUPLER ACCEPTS MULTIPLE SERIES NIPPLES

Features:

- The 1/4" Universal Coupler will accept the Industrial Interchange series, "J" series (Tru-Flate) & "O" Series (ARO-210) Plugs.
- The coupler features automatic push-to-connect operation, high flow machined "window valve" and a sleeve guard which helps prevent accidental disconnects and protects the sleeve from damage.
- While the best quick coupling performance is obtained by matching like series sockets and plugs, the universal coupler permits multiple series plugs to mate with one socket.

"TL" SERIES - [STANDARD AND HEAVY DUTY SCHRADER INTERCHANGE]

PUSH TO CONNECT/LOCK... TWIST TO UNLOCK

Features

- Engineered for speedy coupling and uncoupling.
 - To lock - push in;
 - To unlock - give the coupler unit sleeve a 1/8" turn.
 - Designed to protect against accidental uncoupling. A variety of types and sizes are available to meet specific needs.
- Standard Twist-Lock couplings are ideal for low to medium air flows, such as air tools.

Specifications

- Rated Pressure (psi):** 250
- Temperature Range (Nitrile seal):** -10° to +165°F.
- Locking Device:** Twist-Lock
- Vacuum Service:** 27 HG

Materials:

Aluminum bodies and zinc plated steel sleeves. Buna-N seals. Brass adapters.

"DR" SERIES - RECTUS 21 KA INTERCHANGE

DR SERIES QUICK DISCONNECTS... AUTOMATIC PUSH-TO-CONNECT DESIGN

BRECO DR Series couplers are designed to interchange with Rectus 21 KA couplers using un-valved plugs. The DR Series products provide automatic push-to-connect ease and high flow in a 1/8" connection size.

Features:

- Maximized flow path allows greater flow than other 1/8" NPT coupler designs
- 6 retaining balls versus 5 in the Rectus 21 KA provides greater plug retention
- 9/16" Wrench flats versus 14mm on Rectus 21 KA
- Ball-holes with corner radius have 65% more ball-to-body contact area and provides longer life and increased reliability
- Precision molded leak-proof seal
- Quick, easy push-to-connect design
- Brass construction for corrosion resistance

Specifications

Material: Brass plugs & sockets

Seal: Buna-N

Air Flow: 17 CFM @ 100 PSIG @ 5.0 PSIG Pressure Drop

Working Pressure: 300 PSIG

Body Sizes: 1/8"

Connection Sizes: 1/8" NPT

Interchangeability: Rectus 21 KA, Tomco SC, Camozzi 5000 and CEJN 223 Series

	PART No.	DESCRIPTION

	DR21-1PM	1/8" Plug Brass x 1/8" NPT Male

"DS" SERIES DOUBLE SHUTOFF - [ISO 7241-1 SERIES B]

Features:

1. ISO B, Hardened plugs and sleeves constructed from solid bar stock ensures long service life and maximum resistance to damage from hydraulic and mechanical shock.
2. High flow capacity.
3. BRECO's conical valve with its 360° metal to metal valve stop maintains valve alignment and insures that poppets open fully every time.
4. Captive valve seal ensures "bubble tight" poppet sealing since seal is positively captured by the metal poppet to minimize seal washout or damage from high fluid velocity.
5. Ball locking mechanism ensures reliable connections every time. Many ball bearings distribute the load while providing alignment and excellent swiveling action to reduce hose torque and prolong hose life.
6. Broad range of metals and seal materials allow the use of most fluids.
7. Industrial Interchange

Ordering Information:

"DS" Series couplings are available in ROHS compliant plated steel, brass, and 303 Stainless as standard. Brass couplings have double O-Ring seals (excluding 1/8") and stainless locking balls. Standard seals are Buna-N (Nitrile). Consult factor for optional seals.

All sizes can be furnished with locking sleeves designated by "SL" (Sleeve-Lock) suffix after regular catalog numbers.

Performance:

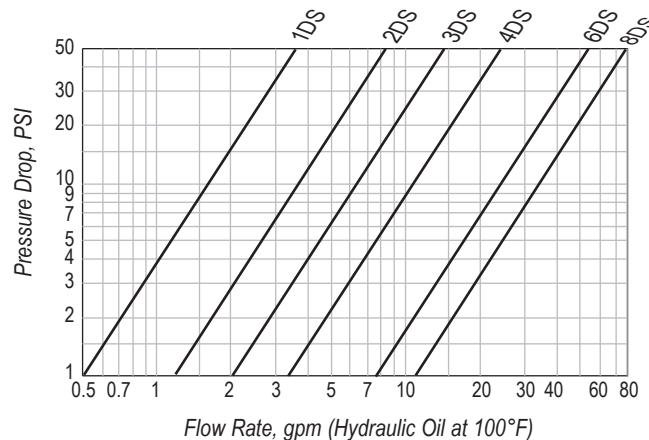

Applications

"DS" Series sockets incorporate valves in both socket and plug halves to prevent fluid loss when the socket is disconnected. These sockets are normally referred to as "hydraulic couplings", but they are used extensively with other media where objectionable. The "DS" Series sockets are available in ROHS compliant steel and brass.

"DS" SERIES DUST PLUGS AND CAPS

Dust Plugs and Dust Caps

- Protective dust plugs and caps play a crucial role in the use of quick couplings and no purchase of a hydraulic quick coupling is complete without the selection of an appropriate dust plug and cap. Dust plugs and caps serve a two-fold function. They keep the mating surface clean and free of contamination and protect the critical mating elements of the coupling halves when they are disconnected. In this way the plug is protected from damage that would make the total coupling unusable.
- When ordering the dust cap/plug body size must correspond to that of the socket or plug.

Features:

- The "4000" Series is a proven design for use on construction equipment, agricultural machinery, oil tools, steel mill machinery, and other demanding hydraulic applications.
- Couplings feature steel ball check valves for dependability in heavy-duty hydraulic applications, within rated working pressures.
- Socket and plug are precision machined from solid barstock. A ball-locking mechanism holds the mating halves together, and critical parts are induction hardened for durability.

"FF" SERIES - [FLUSH FACE]

Features:

- Meets dimensional and performance standards of ISO 16028 as well as HTMA* and NFPA.
- "FF" Series style double shut-off hydraulic couplings are intended for use on medium pressure hydraulic systems up to 2500 psi operating pressures.
- Combines dual flush face valving, push-to-connect operation, minimum fluid loss upon disconnect, low air inclusion and sleeve lock.
- Primary applications are with hydraulic tools where cleaner automatic connections are needed and in machine tool line connections where minimum fluid leaks can be tolerated.

*Hydraulic Tool Mfg. Assoc. and National Fluid Power Assoc.

Specifications:

"6600" SERIES - [ISO 7241-1 SERIES A]

Features:

- BRECO "6600" Series couplings feature poppet valves with solid metal perch that maintains valve alignment and prevents flow checking. Both the sleeves of the socket and plug are case hardened to make the couplings resistant to damage from brinelling and mechanical shock.
- The durable ball-locking mechanism ensures a reliable connection every time.
- These couplings have female pipe and straight thread end configurations as standard. The dimensional requirements of Series A in ISO 7241-1. Socket and plug are interchangeable with other parts compatible with ISO 7241-1.

Applications:

The versatile "6600" Series couplings are used in a wide range of hydraulic applications including construction equipment, manufacturing machinery, and in-plant systems. They can be found anywhere the fluid transfer lines need to be connected and disconnected for operation or maintenance of equipment. Rugged construction makes it a good choice for mobile applications including dump trucks, snow plows, refuse hauling, mining, asphalt paving, truck trailer connections and many more. In-plant machinery applications include hydraulic fluid, chemicals and gas lines for paper mills, steel production, and many varieties of plant maintenance and production equipment.

"W" SERIES - [HIGH PRESSURE COUPLING, ENERPAC INTERCHANGE]

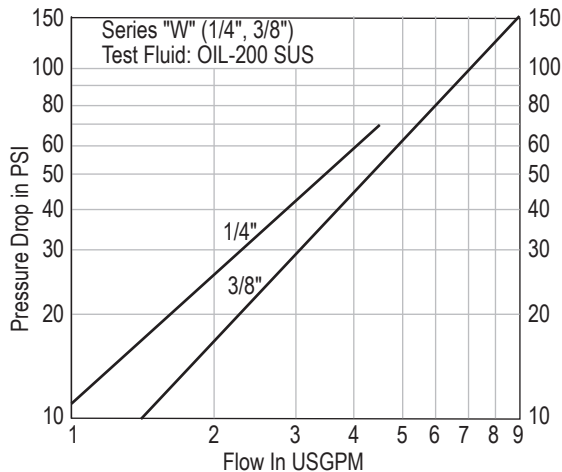

Features:

1. Machined from solid steel bar stock for durability.
2. The "W" Series has a threaded sleeve locking mechanism, mates with matching male threads on the plug. The two halves must be manually threaded together for connection.
3. Hard, chrome alloy balls are used for valving. They are spring loaded for positive sealing of the valve.
4. The valve provides a metal-to-metal seal between the ball and a coined seat.
5. The body seal is polyurethane which resists high pressure extrusion.
6. A threaded valve retainer provides a valve stop that assures positive valve alignment.

Performance:

Applications:

The "W" Series couplings with their threaded union locking system and precision ball-type check valves, are designed for extreme high pressure applications such as found on portable hydraulic rams.

Specifications:

	SIZE
	1/4" 3/8"
Rated Pressure (psi) Static	10,000
Temperature Range (std seals)	-10° to +250°F.

Note:

Protective dust plugs and caps play a crucial role in the life of a quick coupling and no purchase of a hydraulic quick coupling is complete without the selection of an appropriate dust plug and cap.

"H" SERIES - [INTERCHANGE WITH SNAP TITE SERIES H]

Socket Features:

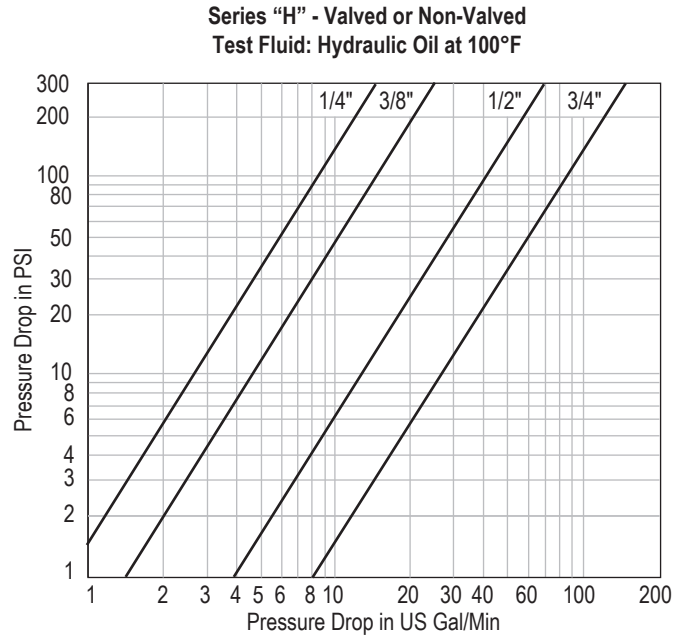

- Latch Mechanism
 - Manual connect and disconnect
 - Steel sleeves are hardened to provide maximum service life
- Material and Finish
 - Machined from solid bar stock
 - Steel components are zinc plated
- Coupled Seal
- Valved units incorporate a Teflon back-up ring to withstand dynamic impulse

Plug Features:

- Machined from solid bar stock
- Steel plugs are hardened and zinc plated to provide heavy duty performance
- Flow - Large diameters provide for higher flow than other double shut-off quick disconnects
- Seals
 - Buna-N (Nitrile) seals are standard
 - Valve seals are crimped in place to maintain integrity during excessive flow conditions

Performance:

INJECTION MOLD SERIES

[INTERCHANGE WITH FOSTER FJT, DME JIFFY-TITE AND JIFFY-MATIC ' AND PARKER INJECTION MOLD SERIES]

1. Available with or without valves in the coupler. Non-valved couplers have minimum flow resistance for maximum cooling. Valved couplers shut off automatically upon disconnect. Valved couplers can be used with either valved or non-valved nipples. A valved nipple, however, must be used with a newly designed "AV" coupler.
2. Nipples are designed to be recessed below mold surfaces to provide more efficient storage of molds and prevent damage to the nipple.
3. Widest choice of end fittings available, including straight, 45° or 90° with standard hose barb or Push-Lok barbs for easy installation.
4. Couplers and nipples are made of corrosion resistant brass, and valved couplers or valved nipples have a Viton O-ring on poppet and Silicone interface seal as standard for use with water glycol (anti-freeze) type fluids commonly used in heat transfer systems.

Applications

Injection Mold Series couplings are specifically designed for connecting coolant lines to molds and dies, on injection molding machinery in the plastics and die casting industries. Injection Mold Series couplings significantly reduce machine downtime by providing fast and easy connection of coolant lines during mold changes. Their short nipples can be recessed below the surface of the mold for more efficient storage of molds. Injection Mold Series couplers are available with or without valves in the female half. Non-valved couplers provide maximum flow for efficient cooling. Valved couplers shut off when disconnected.

Selection Guidelines

Injection Mold Series couplings are designed for a maximum working pressure of 200 PSI. Most thermoplastic and thermostat heat transfer systems have pumps which provide relatively high flow rates at relatively low pressures. Water and water glycol (anti-freeze) systems usually have capacities ranging from 10 to 40 gpm, with most from 10 to 15 gpm. Normal medial opening pressures are 20 to 60 PSI for these systems. Heat transfer systems using oil generally operate from 10 to 30 PSI. However, their flow rates are usually much higher, requiring the total volume of oil to be circulated at least once per minute.

Specifications:

Rated Pressure: 200 PSI

Temperature Range: -90° to +440°

PERFORMANCE DATA		FLOW - WATER - GPM, 10 PSIG PRESSURE DROP
200 Series	Straight-Thru	4.5
	One Way (valved)	2.3
300 Series	Straight-Thru	10.0
	High Flow	13.8
	One Way (valved)	5.9
500 Series	Straight-Thru	28.2

B-PN253	3/8"	1.00	.937	1.373
B-PN352	1/4"	1.00	1.092	1.450
B-PN353	3/8"	1.00	1.125	1.574
B-PN354	1/2"	1.187	1.250	-
B-PN554	1/2"	1.250	1.500	1.750
B-PN556	3/4"	1.500	1.562	1.750

The number of hose connections in a single mold system results in a cumulative pressure drop. Please note the Pressure Drop vs. Flow Rate chart provided, to select the appropriate size.

Temperature is another important consideration. Injection Mold Series couplings with their standard Silicone seal have a temperature capability of -90° to +440°F. Rapid deterioration of the seal and leaking may result if used beyond these limits.

External conditions of temperature, corrosive atmospheres, and other abnormalities may affect coupling performance and must be considered when selection is made consult factory with questions.

GARDEN HOSE COUPLINGS & DRAIN COCKS

GARDEN HOSE COUPLINGS

Features:

- Brass and stainless steel construction for heavy duty service.
- Durable 4-ball locking mechanism for secure connections.
- Temperature-resistant BUNA seals for a leak-free service life.

Applications:

The Garden Hose couplings are used anywhere water hoses are connected and disconnected frequently. They are used on a wide variety of applications including garden hoses, wash down system, and mobile water tank lines. The unvalved design permits maximum flow with minimum pressure drop.

Specifications:

Body Size $\frac{3}{4}$ "

Rated Pressure (psi): 200

Temperature Range (BUNA seals): -40° to +250° F.

Features:

- Provides secure nipple-to-hose clamping. Made from high-quality bar stock.

DRAIN COCKS - BRASS FITTINGS

The design of the drain cock uses metal-to-metal seal which requires only hand tightening to assure positive leak-proof performance.

External seal.

Materials: Brass bodies/steel handles except where noted.

Pressure: 150 psi max. (does not include hose or plastic tubing).

Used With: Copper, aluminum, steel hose and plastic tubing where applicable.

Temperature: -65° to +250°F

Conformance: Designed for automotive or industrial use. Not intended for natural gas, LPG, nuclear or aircraft application, except as noted.

SWIVEL FITTINGS

ZERO PRESSURE CONNECT AND DISCONNECT DESIGN

BRECO Swivel Fittings improve maneuverability and ergonomics when using air tools and spray guns. Functioning like a universal joint, swivel fittings allow the hose to remain vertical at all times, which reduces operator fatigue, repetitive motion trauma, and fitting chafe. The patented non-marring series (plastic encapsulated) is ideal for applications where non-marring and scratch reduction is needed.

Features:

- Steel body (1/4" and 3/8"), Aluminum body (1/2")
- High flow capacity, low pressure drop
- More sizes for simplified plumbing
- Plastic encapsulation (non-marring Series)
- 300 PSIG inlet maximum

Non-Marring Dual Swivel

Non-Marring Single Swivel

Standard Swivel

NON-MARRING DUAL SWIVEL

PART No.	DESCRIPTION
190040	3/8" FPT x 1/4" MPT
190041	3/8" FPT x 3/8" MPT
190042	1/2" FPT x 1/2" MPT

STANDARD SWIVEL (WITHOUT PLASTIC COVERING)	
PART No.	DESCRIPTION
190026A	1/4" FPT x 1/4" MPT
190029A	3/8" FPT x 1/4" MPT
190027A	3/8" FPT x 3/8" MPT
190028	1/2" FPT x 1/2" MPT

When used with percussion tools, a minimum of 18" of hose between tool and swivel is required.

BG SERIES BLOW GUNS & TIPS

BG-CPLR
SHOWN W/OPTIONAL
QUICK CHANGE ADAPTER

UPTO
150
PSI

BRECO BG Series Blowguns combine durability, performance, and safety to meet your specific cleaning or drying applications.

Features:

- Lever activation
- 10 different nozzle choices
- Blow gun kit provides versatility
- Quick-disconnect nozzle adapter
- 1/4" NPT inlet
- OSHA Compliant* @ Max 150 PSI inlet Pressure

BG45

UPTO
125
PSI

Pistol grip blow guns are ergonomically designed for operator comfort and safety.

Features:

- Lightweight nylon body insulates from refrigerated air
- Machined brass valve, nozzle & hose inlet for strength
- Lever style trigger with comfortable grip for variable air flow
- 1/4" NPT female inlet
- 125 PSIG inlet maximum
- OSHA Compliant* meets 1910.242(b) pressure relief and 1910.95 noise level @ Max 150 PSI inlet Pressure

PART No.	DESCRIPTION	Flow (CFM) @ 100 PSIG

* WARNING: To be OSHA compliant, non-relieving nozzles may only be used when the blowgun's inlet pressure is regulated to 30 PSI maximum.

* WARNING: To be OSHA compliant, non-relieving nozzles may only be used when the blowgun's inlet pressure is regulated to 30 PSI maximum.

AIR LINE PRODUCTS

BLOW GUN KIT

The BRECO BGQKIT contains five of the most popular nozzles for industrial and automotive uses. This kit includes a high quality, lever-operated heavy-duty blow gun featuring a patented quick disconnect nozzle adapter which allows users to switch nozzles quickly and easily. This multi-use kit contains a high flow safety nozzle, six inch extension safety nozzle, rubber tip nozzle, needle tip nozzle, and air-screen safety nozzle. For handy storage, a clear vinyl compartmented snap pouch is included. Ideally suited as a counter sale product.

To Order Complete Kit Use Part Number - **BGQKIT**

AIR CHUCKS

Three BRECO Air Chucks are available: a right angle heavy-duty air chuck, a heavy duty straight body air chuck, and a dual air chuck for all your air fill needs. All three air chucks have 1/4" FPT inlets.

PART NO.	DESCRIPTION
AC40	Right Angle Air Chuck, 1/4" FPT
AC42	Dual Air Chuck
AC45	Straight Body Air Chuck, 1/4" FPT

SAFETY BLOW GUN B-8003

The BRECO Blow gun provides greater force for chip removal with less air consumption... saving energy without loss of performance. The features of this low cost blow gun offer top performance for any application.

Easy Operation: Thumb lever operation allows operator to have maximum control. Hooked shaped body for convenient storage when not in use. Built-in orifice and tamper resistant relieved tip prevents pressure buildup above 29 PSIG if nozzle is obstructed.

Specifications:

Inlet Sizes: 1/4" NPT

Temp. Range: 32° to 175° (0 to 79°C) Max

Inlet Pressure: 180 PSIG (12 bar)

Regulated Pressure: 29 PSIG (2 bar) Max

Caution: These blow guns should not be used for fluids other than air, nor in applications which may exceed maximum recommended operating conditions.

HOSE MANIFOLDS

3-WAY HOSE MANIFOLD

Add versatility to your compressed air systems and simplify multiple tool operations. The BRECO 3-Way Hose Manifolds allow three work stations to use the same air supply. Featuring a port design to maximize air flow through the body for less restriction on flow than other similar products on the market. Each manifold accepts three quick couplers or outlet hoses. Manifold has female NPT inlet and three female NPT outlets. Manifolds are available in three different inlet/outlet sizes.

3-Way Manifold

3-Way Flat Manifold

PART No.	DESCRIPTION	INLET	OUTLET
301787.01 (B-3404)	3-Way Manifold	1/4"	1/4"
301805 (B-3406)		3/8"	1/4"
6124-A	3-Way Flat Manifold	1/4"	1/4"

3-WAY HOSE MANIFOLD WITH SOCKETS OR SWIVEL PLUGS

An expanded style of our 3-Way Hose Manifold is available pre-assembled with a choice of three D Series manual sockets or three swivel plugs. This operational versatility allows three independent work stations to function with the same air supply. The port design

of the BRECO 3-Way Hose Manifold maximizes air flow through the body and is less restrictive on flow than other similar products on the market. The flexibility of quick disconnects, swivel plugs, or outlet hoses maximizes air operations while improving efficiencies.

3-Way Manifold Shown

Free swivel under pressure eliminates hose twist

POLYURETHANE RECOIL HOSE

Fully Assembled and Ready to Use Configurations with and without DW-Series Universal Sockets Includes Swivel NPT Fitting End Pre-Installed with Thread Compound 15' and 25' Lengths

BRECO Polyurethane Recoil Hose has greater durability than other types of hose due to exceptional wear characteristics. Polyurethane Recoil Hose is kink resistant and has exceptional memory characteristics due to elastic properties of the polyurethane hose. Hoses are pre-assembled with reusable brass fittings for reduced assembly time.

Two assembly configurations include BRECO DW Series Universal Sockets ready for connection to air tools or other accessories. The BRECO Polyurethane Recoil Hose products are pre-bagged for convenience. Ideally suited as counter sale products.

Features:

- Greater durability than other recoil hoses due to exceptional wear characteristics
- Longer life expectancy due to kink resistant properties
- Superior recoil memory due to elastic properties
- Pre-assembled and ready to use

Specifications

- Construction: Yellow polyurethane recoil hose with reusable brass fitting ends Inlet end includes in-line brass swivel fitting
- Working Pressure: 170 PSIG @ 75F
- Temperature Range: -40F to +125F
- Working Length: 80-90% of hose length

Safety First	

THINK SAFETY FIRST

Pressurized lines employing quick-disconnect couplers should be considered potentially hazardous and must be used with safety in mind. Proper selection and use of appropriate couplers will help you maintain a safe working environment for personnel, equipment, and products.

BRECO quick-disconnect couplers are precision devices—do not modify, strike, or otherwise abuse the coupling halves. Never exceed the pressure or temperature limits and always protect the hose and coupler assembly from moving equipment.

Be cautious when moving pressurized hoses as some types of quick-disconnect couplers may unintentionally disconnect if the coupler

encounters an obstacle as the hose is dragged. The pressurized media subsequently escaping from the freed line can force the hose assembly to violently whip about, possibly causing personal injury, equipment/product damage, and economic loss. BRECO Safety Vent couplers and plugs, designed to minimize hose whip hazards, should be used wherever the risk is present. Personnel must be instructed to maintain a firm grip on both coupler halves when connecting or disconnecting pressurized lines.

Above all, always wear appropriate personal protection equipment and safety glasses when working with, or near, pressurized lines utilizing quick-disconnect couplers.

Safety Vent Couplers

BRECO Safety Vent couplers are designed to minimize the possibility of inadvertent disconnection and potentially hazardous hose whip. BRECO SV and SVPC Series Safety Vent couplers are "zero pressure" connect/disconnect type couplers designed to safely vent downstream pressure prior to disengaging the plug.

BRECO SVPC and SV Series Safety Vent Couplers

Safety Vent couplers are nearly effortless to connect and great for hose use. They are also especially useful for single-hand operation when they are mounted to hard lines such as an overhead air drop. Once inserted into the SV socket, the plug is lightly gripped and will stay in place allowing the operator to use the same hand to slide the sleeve straight forward to the "on" position. As the sleeve is being moved to the "on" position, the SV socket will securely lock the plug in place and then turn the flow "on".

SV Series sockets can also be used as a 3-way valve to turn off the flow of air and exhaust the downstream pressure without disengaging the plug. By turning and sliding the sleeve to the "exhaust" position, downstream air pressure is relieved but the plug remains locked in place. Turning and sliding the sleeve in the opposite direction allows air to flow again.

BRECO SV Series couplers are the ultimate solution to accidental disconnect hose whip dangers.

BRECO SVPC Series Safety Vent Couplers

The SVPC Series Safety Vent couplers provide the same safety vent features as the SV Series, and are plastic encapsulated to prevent scratching or marring of finished or fragile surfaces. The SVPC Series sockets will prevent plug release until the downstream line pressure is vented to atmosphere and the plug can be safely removed.

Ball-Lock Option

"Ball-Lock" (BL) option employs a ball or pin to restrict sleeve retraction and is available on BRECO D Series and DM Series sockets. Couplers with the BL designation are constructed with sleeves having a slot that must be aligned with a ball or pin before the sleeve is allowed to retract. Rotating the sleeve 180 degrees so the slot is not aligned with the ball or pin will minimize the chance of accidental sleeve retraction.

Ball Check Plugs

Ball check plugs are offered in several sizes of Industrial Interchange plugs. Ball check plugs have a free-floating internal ball that acts as a check valve when the plug is disconnected from the coupler. The check valve action minimizes hose whip by causing the pressurized gas to escape slowly from the disconnected hose.

Air Blowguns

BRECO Blow Gun products are designed for cleaning, blow-off, inflation, and other operations. The blowguns are available with zinc or nylon bodies with a variety of optional nozzles for nearly any use. BRECO Blow Gun tips are available in OSHA compliant and (*) non-compliant models to suit your particular needs.

Blow Guns and nozzles that comply with OSHA regulations will limit the pressure of air exiting the nozzle to less than 30 PSIG when the nozzle is dead-headed.

() Note: If a non-OSHA compliant blow gun nozzle (BGN6, or BGN7) is used, air pressure to the gun's inlet must be regulated to less than 30 PSIG to meet OSHA regulations.*

We strongly recommend that the end user obtain proper training before using quick-disconnect couplers, air blowguns, and other BRECO products. Thoughtful analysis of the user's needs and application must be given before selecting a product.

OUR DEDICATED EMPLOYEES AND DISTRIBUTORS ARE EAGER TO EXPLAIN THE FEATURES, BENEFITS, AND PROPER SELECTION OF BRECO PRODUCTS, AND ANSWER YOUR QUESTIONS REGARDING THEIR CORRECT APPLICATION AND SAFE USE.

Be Safe When Selecting Quick Couplings!

! Quick disconnect couplings can fail without warning! Prior to the operation of quick coupling products, be sure to inspect and replace worn out fittings and safety devices. If a leak is detected during operation, release the pressure from the circuit before investigating the cause of the fluid leak. Do not use your fingers or skin to check for leaks, high pressure leaks of fluids can easily penetrate the skin and can cause serious injury or death.

Safe Quick Coupling Practices

- Always wipe the coupling cavities and faces clean before connecting a coupling.
- Connect coupling before installation to ensure that it works properly.
- 3. Always check the body seals before connecting a coupling.
- 4. Shut-off power source before connecting a coupling.
- 5. Always install a safety check valve on a pneumatic line and/or compressor.
- 6. Always use a safety cable on large air lines (½" lines and larger).
- 7. Always use a whip hose on hydraulic or air tools.
- 8. Use dust caps or plugs when couplings are not in use.
- 9. If the locking sleeve is inoperable, check the safety lock.
- 10. Wear eye protection while connecting or disconnecting a coupling.

Unsafe Quick Coupling Practices

- 1. Never hit coupling valves to release trapped pressure.
- 2. Never leave couplings in the path of moving equipment.
- 3. Never use couplings near a welder, flash heat, or fire / flame sources.
- 4. Never use API modified sealants or over apply PTFE tape during installation.
- 5. Use care if you must install quick couplings onto black iron pipe.
- 6. Never hit a coupling sleeve with a hammer or blunt object.
- 7. Never overtighten a coupling connection.
- 8. Never rotate a quick disconnect coupling under pressure.
- 9. Do not overpressurize quick disconnect couplings.
- 10. Never use a hose with a quick disconnect coupling to lift a tool.

OSHA Regulations Ensure Operator Safety

Safety Cables

Safety Check Valves

Standard - 29 CFR, 1926.302 (partial):

(b)(1) Pneumatic power tools shall be secured to the hose or whip by some positive means to prevent the tool from becoming accidentally disconnected.

(b)(2) Safety Clips or retainers shall be securely installed and maintained on pneumatic impact (percussion) tools to prevent attachments from being accidentally expelled.

(b)(4) Compressed air shall not be used for cleaning purposes except where reduced to 30 PSI and then only with effective chip guarding and personal protective equipment which meets the requirements of Subpart E of this part. The 30 PSI requirement does not apply for concrete form, mill scale and similar cleaning purposes.

(b)(5) The manufacturer's safe operating pressure for hoses, pipes, valves, filters and other fittings shall not be exceeded.

(b)(6) The use of hoses for hoisting or lowering tools shall not be permitted.

(b)(7) All hoses exceeding ½" inside diameter shall have a safety device at the source of supply or branch line to reduce pressure in case of hose failure.

Standard - 29 CFR, 1926.603 (partial):

(a)(9) Steam hose leading to a steam hammer or jet pipe shall be securely attached to the hammer with an adequate length of at least ¼" diameter chain or cable to prevent whipping in the event the joint at the hammer is broken. Air hammer hoses shall be provided with the same protection as required for steam lines.

(a)(10) Safety chains, or equivalent means, shall be provided for each hose connection to prevent the line from thrashing around in case the coupling becomes disconnected.

BE SAFE WHEN INSTALLING QUICK COUPLINGS

INSTALLATION OF REUSABLE HOSE COUPLINGS

1 Trim the end of the hose as square as possible.

2 Insert Hose completely into ferrule and make note of how deep the hose goes.

3 Mark the point of full hose insertion depth with a piece of tape.

4 Verify tape line is correct for full insertion.

5 Add a bit of lubricant to the reusable hose barb before inserting into the ferrule.

6 Turn reusable hose barb into ferrule ensuring hose stays completely inserted.

7 Tighten reusable hose barb into ferrule ensuring hose stays completely inserted.

8 Completed connection, ensuring hose is completely inserted.

Blow Guns & Hose	Swivels
	Safety First

BE SAFE WHEN INSTALLING QUICK COUPLINGS AUTOMATIC SAFETY EXHAUSTING COUPLER OPERATION

1 To Disconnect;
Begin by holding the hose with three of your fingers leaving your thumb and index finger free.

2 Grab the sleeve with your thumb and index finger and begin to pull the sleeve towards the palm of your hand.

3 After pulling the sleeve, the plug will move out of the couple slightly. Continue to hold the hose and couple sleeve until **all air is fully exhausted**.

4 After the line is fully exhausted, you are able to safely separate the plug from the coupler.

BE SAFE WHEN INSTALLING QUICK COUPLINGS INSTALLATION OF TAPERED THREAD CONNECTIONS

1 Apply 1½ to 2 wraps of PTFE tape, starting one or two threads from the lead edge, in a clockwise direction. For type 316 stainless steel, be sure to use stainless grade tape.

2 Check threads to make sure there is no damage and that tape is properly installed. Align threaded connections and carefully begin threading the two halves together..

3 Finger tighten the connection.

4 With *even and smooth* force applied, wrench tighten according to the “Turns From Finger Tight” values listed in the table below.
DO NOT OVERTIGHTEN!

5 Coupling is ready for use.

SAE SIZE	NPFE THREAD SIZE	TURNS FROM FINGER TIGHT
-4	¼" - 18	2
-6	⅜" - 18	2
-8	½" - 14	2
-12	¾" - 14	1.5
-16	1" - 11½	1.5

Do Not Overtighten!

PIPE THREAD IDENTIFICATION

Nominal Pipe Size (inches)	Actual Pipe Size (inches)	Nominal Thread Size (inches)
1/8"	0.41"	1/8" - 27
1/4"	0.54"	1/4" - 18
3/8"	0.68"	3/8" - 18
1/2"	0.84"	1/2" - 14
3/4"	1.05"	3/4" - 14
1"	1.32"	1" - 11 1/2
1-1/4"	1.66"	1-1/4" - 11 1/2
1-1/2"	1.90"	1-1/2" - 11 1/2
2"	2.38"	2" - 11 1/2
2-1/2"	2.88"	2-1/2" - 8
3"	3.50"	3" - 8

Male Pipe Thread Gauge

- Stand pipe thread vertically on diagram
- Align outside diameter of pipe thread with matching circle
- Read nominal pipe size directly above circle

EXAMPLE 3/4" Male Pipe Thread (MPT)

Female Pipe Thread Gauge

- Hold pipe thread against scale on edge of page
- Align one side of pipe thread with illustration base line
- Read nominal pipe size directly from scale

EXAMPLE 3/4" Female Pipe Thread (FPT)

Maximum Slip Load

Max. Pipe Slip indicates that Sliding starts when the specified values (A) are reached.

Recommended Clamping for Bends

Bends in the line should be clamped on BOTH sides of the bend as shown.

BETA CLAMP MATERIAL PROPERTIES Polypropylene (PP) Cushion

Material Properties		
Density	-	0.906 g/cm ³
Tensile strength	DIN 53454	25-35 N/mm ²
Flexure stress limit	DIN 53452	36N N/mm ²
Compressive strength	DIN 53454	90 N/mm ²
Impact strength	DIN 53453	No break
Thermo Properties		
Max. temp. resistance	-30 to 90°C	
Thermal conductivity	15 x 10 ⁻⁵ /°C	
Linear expansion coeff.	0.22 W/[mk]	
Electrical Properties		
Specific volume	DIN 53482	1016 ohm x cm
Chemical Properties		
Consistent for weak acids, solvents, mineral oils and seawater.

The outlined particulars are approximate values and are only valid as references, which are not binding, also with regard to possible protection of third parties, and they do not exempt you from your own examination of suitability of the products delivered by us. Therefore, these values can only be used in a limited sense for construction purposes. The application of the products is carried out outside our control possibilities and, therefore, is exclusively subject to your own area of responsibility. If, however, liability should be possible, it would be limited for all damages to the value of the goods supplied by us and in use by you. It goes without saying, that we guarantee the perfect quality of our products according to our general sales and delivery conditions.

INSTALLATION ON WELD PLATES

ZSi weld plates are available for the following Series:

- Standard-Series
- Heavy-Series
- Twin-Series
- Beta Adapters

For best alignment of ZSi clamps we recommend that you mark their location before welding.

INSTALLATION ON MOUNTING RAILS

ZSi mounting rails can be used with the following Series:

- Standard-Series
- Heavy-Series (Group H3 to H6)
- Twin-Series
- Beta Adapters

ZSi mounting rails are available in two different height sizes and are either welded or bolted to the supporting construction.

For Standard-Series and Twin-Series insert hexagon rail nut and turn to lock. For Heavy-Series slide in rail nut.

BETA CLAMP INSTALLATION

INSTALLATION ON Z-STRUT CHANNEL

The Z-Strut Nuts can be used with any clamp using a 1/4-20 mounting bolt. This includes:

- Standard-Series
- Twin-Series (T1 Only)
- Beta Rubber Inserts

(1) Insert Z-Strut Nuts Into Z-Strut Channel And Turn to Lock

(2) Push Bottom Half of Clamp Onto Z-Strut Nuts

(3) Install Pipe

(4) Add Top Cushion

(5) Add Top Plate and Bolt Into Position

NOTE: The Z-Strut Nut will slide within the Z-Strut Channel so clamp units can be adjusted before being firmly bolted.

MULTI-LEVEL ASSEMBLY

ZSi multi-level pipe clamps permit easy stacking of several tubes or pipes of the same group. The clamps are connected by stacking bolts.

Safety plates are inserted between the clamps to prevent the stacking bolts from turning.

The example below shows a stacking clamp added to a welded clamp, however, ZSi stacking assemblies can be fitted to weld plates, rails, or strut in the same manner.

(1) After the Top Cushion is Added, Secure it with the Stack Bolts

(2) Add Safety Plate to Prevent Stacking Bolts from Turning

(2) Assemble Another Clamp Onto the Stacking Bolt in Same Manner as Single Clamps are Installed

Installation of Z-Clamps

Z-Clamps are installed in much the same manner as Beta Clamps. The weld studs are welded onto existing structure and the clamp assembled onto them.

Installation of Beta Adapter

Beta Adapters are installed in much the same manner as Beta Clamps. The weld plate is welded onto existing structure and the Beta cushion and adapter is assembled onto it.

Z-CLAMP & BETA ADAPTER OPTIONAL ADAPTERS

FEMALE JUNCTION ADAPTER

O-RING FACE SEAL

37° FLARE MALE JUNCTION ADAPTER
